

Who Is Jack Sigan?

Co-Founder and Principal Engineer of **Whiskey Resources LLC and Whiskey Systems Online**, Jack Sigan has been in the beverage alcohol industry since 2014 when he left a twelve-year career at Motorola Solutions. At Motorola, he worked in a variety of software and systems engineering roles, as an engineering manager, and as a system architect all within the realm of mission-critical voice and data networks for government and public safety.

Jack was no stranger to the distilling industry when he met Donald Snyder (President of Whiskey Resources, LLC) in 2014, with both his father and grandfather having been chemical engineers specializing in petroleum processing and catalytic cracking. Within a year of starting work on Whiskey Systems Online, Jack decided to make the full time jump into the distilling world and has not looked back. Jack's formal distilling education is vast including attending Six & Twenty Distillery's Distillery Management class and mentoring with distillers across the country. 5 years later, Jack is now

recognized as an expert in the distilling industry and regularly invited to present on a variety of topics including TTB compliance, distillery operations data tracking and trends, and manufacturing cost accounting.

While building Whiskey Systems, Jack has worked with over 200 craft distillers on everything from cost accounting best practices to implementing new functionality to supporting specialized distillation requirements. Jack has also engaged extensively with dozens of distillers for on-site compliance reviews, implementations, and cost accounting setups. Combining forces with Donald Snyder, Jack lectures on TTB compliance at numerous ADI and ACSA conferences. Jack has designed and developed the Whiskey Systems Online platform and cultivated a best-in-class engineering and support team to help distillers

navigate the complicated world of TTB compliance. In addition to managing the day-to-day, Jack consults and advises distillers, owners, accountants, CEOs, CFOs, engineers, and a host of other friends in the industry. He enjoys learning as much as possible about any topic including distilling, chemistry and equipment design and using that to improve Whiskey Systems Online.

Jack earned his Bachelor of Science degree in Electrical Engineering magna cum laude at Bradley University in Peoria, IL.
